

WELACTIN^{Ω3} Canine

Essential Omega-3 Fatty Acids

You may already know about the importance of the omega-3 fatty acids eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA) to human health. These fatty acids also play an important role in the health of your dog during all stages of life. When given at appropriate levels, EPA and DHA have been shown to help support skin and coat health and overall wellness, including brain and nervous system development, trainability, the heart, kidneys and the immune system.

EPA and DHA are derived from cold-water fish. These fatty acids offer benefits beyond what is provided from flaxseed or other plant oil fatty acids. The EPA and DHA in Welactin Canine can enable your dog to experience an enhanced quality of life – *For the Life of your Dog.*

WELACTIN^{Ω3}
Canine

Ω A high-potency fish oil – A rich source of omega-3 fatty acids EPA and DHA derived from cold-water fish.

Ω Tasty formulation – Dogs love it!

Ω Bioavailable formulation – Active ingredients shown to be absorbable in dogs.

Ω Convenient packaging – Bottles with a flip top lid for easy dispensing and an accompanying scoop to measure an appropriate amount of Welactin. Also available in 120 count softgel caps.

WELACTIN^{Ω3} Canine

Helps support skin and coat health plus a lifetime of overall wellness for your dog.

16 FL. OZ.

8 FL. OZ.

120 Softgels

Omega-3 Supplement for Dogs

Helps Support:

-  Skin & Coat Health
-  Heart Health
-  Kidney Health
-  Brain/Vision
-  Immune System Health

For The Life Of Your Dog

Welactin[®] Canine... For the Life of your Dog

Healthy Beginning

The omega-3 fatty acids eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA) have been found to help support skin and coat health, joint health, and immune system function, which is important in young dogs.

DHA is a major structural component of the brain. It is the most abundant fatty acid in the brain and plays an essential role in the development of the retina and the central nervous system. Research shows that feeding diets enriched in DHA enhances the intelligence and trainability of puppies.

Welactin[®] Canine supplements EPA and DHA for a healthy beginning of your dog's life.

Production of the fatty acids EPA and DHA is limited in the body and therefore may need to be supplemented in the puppy's diet. Welactin Canine provides EPA and DHA in two easy to administer formulations: a liquid and a softgel.

Prime of Life

As adults, dogs are in the prime of their life. Although this may be the healthiest time in the life of your dog, it is at this stage that some dogs start developing health issues primarily associated with skin/coat and joint health.

Welactin[®] Canine helps maintain your dog at the prime of life.

A balanced intake of omega-3 fatty acids has been associated with supporting or improving skin/coat and joint health. Welactin Canine provides an excellent source of EPA and DHA which are often found in limited amounts in a dog's diet.

It is important to supplement bioavailable omega-3 fatty acids during the prime years to help maintain the proper function of major organs and the immune system.

Golden Years

Senior dogs may face an increased risk of compromised organ function as they age. It has been found that some of these issues may be reduced with a diet enriched with EPA and DHA. These fatty acids have been associated with supporting kidney, heart, and joint health.

Welactin[®] Canine helps to keep your dog healthy and active in the golden years.

Welactin Canine provides a concentrated source of EPA and DHA which are beneficial to help support the overall wellness of your senior dog. Additionally, an older pet's memory function may benefit from the DHA in Welactin.
